Style 1: Veri	nacular	Form: Front Ga	abled
Plan: S	Siding: E	Windows: E	Porch: E
Classificatio	n: Noncontributing	•	•

This 1 story residence is vernacular in style and it has been extensively remodeled. The plan is a modified rectangle with a gable front and the building is covered in vinyl siding. The house features a recessed porch to the east and a single picture window on the west end of the facade. Most of the original windows have been replaced. The house is supported on a short raised foundation constructed of rubble basalt. The rear section appears to be an addition, however it was likely done soon after original construction as it is shown on the 1902 Sanborn Map.

Statement of Significance

The William T. Wharton House I was constructed in 1888 for a merchant and grocer who arrived in Spokane from Iowa in 1888. It is the oldest house remaining in the district. Although the residence is associated with a prominent early Spokanite, the house has modest vernacular styling and has experienced extensive changes to the siding, windows, and porch. The house was constructed during the district's period of significance but does not retain sufficient integrity to contribute to the district.

Resource ID: 2		Address: 704 S Jefferson St
		Additional Names: Woodroofe
		House
Date(s) of Co	nstruction: 1889,	addition in 1935
Architect: U	nknown	Builder: Unknown
Style 1: Quee	en Anne	Form: Two Story House
Plan: M	Siding: E	Windows: E Porch: E
Classification	n: Noncontributin	ig

Physical Description

This 2 story residence was designed in the Queen Anne style but the tower has been truncated and the house covered in aluminum siding. The plan is rectangular and it is situated on a corner lot. A porch originally stretched across the primary façade, but it was enclosed in the 1930s to accommodate apartments. An additional porch and entry was originally located on the northwest corner of the house adjacent to the tower but it too was enclosed to accommodate additional apartment units. The windows in the house have been replaced with metal windows and it appears the sizes of the window openings may have been changed.

Statement of Significance

The house was constructed in 1889 in the Queen Anne style. Significant changes were completed in the 1930s to accommodate apartments. Although the house was converted during the district's period of significance, the aluminum siding and replacement windows that were added in the 1980s significantly impacted the integrity and the ability to convey its Queen Anne styling. The house does not retain sufficient integrity to contribute to the district.

Resource II	Resource ID: 3		S Cedar St
Historic Name: Rugge House		Additional Na	mes:
Date(s) of C	onstruction: 1889		
Architect: Unknown		Builder: Unknown	
Style 1: Que	en Anne	Form: Cottage	
Plan: I	Siding: M	Windows: I	Porch: I
Classificatio	n: Contributing	-	

This 1.5 story cottage was designed in the Queen Anne style with typical features including an asymmetrical form with a front gabled roof with secondary gable dormers. Other Queen Anne characteristics include spindlework columns, dormers covered in patterned wood shingles, and an angled bay with multi-light windows and detailed brackets supporting the gable end. Most of the siding has been replaced with vinyl material.

Statement of Significance

The Henry A. and Pauline Rugge Residence was constructed in 1889. The architect is unknown, but the Queen Anne styling is still evident in the multi-light windows, varied wall surfaces, spindlework columns, and the varied dormers. The house was constructed during the district's period of significance and it retains sufficient integrity to contribute to the district.

Date(s) of Con	struction: 1890		
Architect: Un	known	Builder: Unknown	
Style 1: Colon	ial Revival	Form: Two Story House	
Plan: M	Siding: E	Windows: M Porch: E	
Classification	Noncontributing		

Physical Description

This 2 story residence presents in a Colonial Revival style with a hipped roof and a small gable roof with arched detail over the front door. The plan is rectangular and the house has been wrapped in horizontal vinyl siding. The house originally featured a full width 1 story overhung porch that was removed sometime between 1910 and 1950. It appears the house was also converted from a one and a half story to a 2 story altering the roofline. A single cornice return on the west end hints of the original roofline and Colonial Revival styling. There are two multi-light windows on the primary façade, one on the first floor and one on the second.

Statement of Significance

The Herman and Rosa Preusse House was constructed in 1890 for prominent architect and German immigrant Herman Preusse and his wife, Rosa. It is possible that Preusse designed the house himself, but that could not be confirmed. It is the third oldest house remaining in the district. Although the residence was probably an early example of Preuse's residential design work, the house's original design has been altered and the Colonial Revival styling and has been mostly stripped away, The house was constructed during the district's period of significance but does not retain sufficient integrity to contribute to the district. Additional information may provide clues to reclassify this house as contributing.

Classification	: Noncontributing	•		

This 2 story apartment building was originally constructed as a single family house but it was remodeled into the Minimal Traditional Style. The plan is rectangular and it is situated on an elevated site that is accessed by concrete steps. The building is covered in painted stucco with internal grid vinyl windows lining both floors of the primary façade. **Statement of Significance**

The J.H. Spear House was constructed in 1890 for prominent realtor and businessman J.H. Spear and his family. The house was converted to apartments in the 1920s and the building was fully remodeled in 1956 to remove the third floor and construct additions that compose the current form. Although the residence is associated with a prominent early Spokanite, the house's original design is not identifiable as it has been completely remodeled. The house was constructed during the district's period of significance but substantial changes were completed after 1955. The property does not retain sufficient integrity to contribute to the district.

Physical Description

This 2 story residence was designed in the Queen Anne style with distinct curved elements on the porch and the second story bay window. The plan is rectangular and the house sits above street level on a corner lot. The house features a hipped roof with a porch on the east end supported by square columns. A concrete staircase surrounded by brick walls leads up to the elevated site and a basalt retaining wall borders the north and west property lines. The first floor and second floor are covered in horizontal wood siding. Two curved bay windows dominate the fenestration pattern, one on the first floor and one on the second. The house was converted to multifamily in the 1930s, it has since been returned to single family use.

Statement of Significance

The Hanauer-Cook House was constructed in 1890 for a clothing store operator and his wife, Joseph and Nettie Hanauer, but they only lived there for a short time. A later resident of the house is also recognized in the historic name, Harl J. Cook, a newsman, real estate broker, and museum supporter, and his wife Maria. The architect is unknown, but the Queen Anne styling is distinct and intact. The house was constructed during the district's period of significance, it is individually listed on the Spokane Register of Historic Places, and it contributes to the district.

This 1 story residence is vernacular in style with a front gabled roof. The plan is a modified rectangle and the house is situated on an elevated site with an offset concrete staircase providing access. The house features a recessed porch on the west end, but an extension of the porch with an overhanging roof appears to have been removed (Sanborn Map). The first floor and gable end are covered in narrow horizontal wood siding with a belly band dividing the first floor from the gable end. There is a replacement plate glass window on the primary façade but some original windows remain.

Statement of Significance

The D.M. McLeod House was constructed in 1891 for clothing store operator and real estate broker D.M. McLeod and his family. Although the house is a simple vernacular design, it retains narrow wood siding and a distinct belly band with a prominent front gable. The house was constructed during the district's period of significance and retains sufficient integrity to contribute to the district.

This 2.5 story residence was designed in the Queen Anne style with a double front gable with a central wing. There is an overhung wraparound porch supported with spindlework wood columns. A second floor porch is centered under the front gable creating the double gable form. The house is covered in horizontal wood siding. A wood window with a transom is located on the first floor and an arched window at the attic level. The east elevation is dominated by the cross gable wing and a projecting bay at the first floor.

Statement of Significance

The First United Presbyterian Church Parsonage was constructed in 1891 to provide living quarters and event space for the First United Presbyterian Church located downtown. The house served as the parsonage into the 1920s. The Queen Anne style is expressed with typical features including spindlework, double gable, and asymmetrical presentation. The house was constructed during the district's period of significance and it retains sufficient integrity to contribute to the district.

Classification	n: Contributing	· · ·

Physical Description

This 2.5 story residence was designed in the Queen Anne style with intricate spindlework detailing. The house is capped with a complex cross gabled roof with both secondary gables and dormers. An overhung porch supported with square shaped columns and a pedimented entryway are located over the primary door. The porch originally stretched to the south end of the east façade, but it was enclosed to accommodate apartment units. A circular second floor balcony is evocative of a Queen Anne tower. The first floor and second floor are covered in horizontal wood siding and the top story and gable dormers are covered in decorative wavy wood siding framed in straight trim. Tall floor to ceiling rectangular windows line the first floor and tall rectangular windows are located on each of the gable ends. The windows feature decorative trim and the upper stories have distinct window headers. True to Queen Anne styling, multiple devices are used to avoid flat wall surfaces including: shingles, trim, and varied wall depths. The house was converted to a duplex in the 1920s, apartments were added in the 1950s, and a fire escape was added in the 1980s.

Statement of Significance

The Clarke House was constructed in 1891 for prominent businessman Charles W. Clarke and his family. After Charles died in 1940, his daughter Emma, an English teacher at North Central High School, lived in the house until the 1950s. The architect is unknown, but the house retains typical Queen Anne style features including multiple gables at different heights, a second story balcony, and an effort to avoid flat surfaces. The house was constructed during the district's period of significance and it retains sufficient integrity to contribute to the district.

Classification	n: Contributing		

This 3 story residence was designed in the Colonial Revival style and is situated on a corner lot. The lively silhouette of the complex roofline conveys its original high quality residential design. There is a three story octagonal tower with a conical roof. A small overhung porch replaced a full width wraparound porch (Sanborn Map). The first floor and bottom half of the second floor are covered in varying width horizontal siding and the top story and gable dormers are covered in original wood shingles. The second and third stories retain most of the original design and materials. Windows are mostly vinyl and some window opening sizes have been changed to accommodate replacements. The house was converted to apartments in 1904 and the porch was removed in 1936.

Statement of Significance

The Mary and H.T. Fairlamb House was constructed in 1892 for prominent realtor and property developer H.T. Fairlamb and his family. H.T. died soon after the house was finished, but his wife continued to live there until 1904 when the house was converted to apartments. The architect is unknown. Its Colonial Revival styling is still evident through the use of multiple gables at different heights, an octagonal tower, and varied wall surfaces. The house was constructed during the district's period of significance and it retains sufficient integrity to contribute to the district.

Plan: I	Siding: E	Windows: E Porch: I	
Classificatio	n: Contributing		

Physical Description

This 2 story residence is vernacular in style with a front gabled roof. The bank of windows on the first floor and the lack of a porch convey a neighborhood retail use. The house is covered in horizontal metal siding. The front door is situated slightly east of center with a small roof overhead. The primary façade was altered to accommodate a neighborhood retail use. The windows have been replaced with vinyl units. The east elevations features a cross gable and the west elevation has a matching cross gable with a small shed roof overhang above a basement entrance.

Statement of Significance

The Goldman's Grocery Store was originally constructed as a single-family residence in 1892 but was converted to mixed use in 1928 to accommodate a Jewish grocery store that catered to a dense Jewish population in the district. The bank of windows in the façade, and the lack of a porch, convey this historic use. The otherwise modest building does not display its original materials and has only fair integrity. The modification of the building took place during the period of significance. It is one of few examples of neighborhood retail in the district and it serves as a reminder of the district's Jewish history. The former Goldman's Grocery Store is a contributing building in the district as its significance comes mostly from its use and history rather than its architecture.

This 2.5 story residence was designed in the Queen Anne Free Classic style with a dominant gable front. The plan is rectangular and it is situated on a corner lot. A porch wraps from the primary façade to the east elevation where the front door has been relocated. The porch originally stretched across the primary facade, but it was enclosed to accommodate apartment units. A recessed porch is tucked beneath a Syrian arch and simple balustrade on the top floor. The first floor and second floor were covered with replacement siding in 1975 and the top story retains original wood shingles. A combination of original and replacement windows dot the primary facade. The west elevation has an exterior fire escape to meet multi-family safety standards (permits, 1975). The house was converted to multifamily in the 1930s and additional units were added in the 1940s.

Statement of Significance

The Dr. George S. Allison House was constructed in 1892 for prominent doctor, surgeon, and politician Dr. George S. Allison and his family. After George died in 1928, the house was converted to multi-family. The house retains typical Queen Anne elements including steeply pitched rood, arched third floor balcony, and shingle siding. The house was constructed and converted during the district's period of significance, but it does not retain sufficient integrity to contribute to the district.

Physical Description

This 3 story residence was designed in the Queen Anne style with a dominant circular tower with dome shaped roof. The house is situated on a corner lot. There is a curved wraparound porch with a pedimented entryway over the front door. The first floor and second floor are covered in horizontal wood siding and the tower and belly band section are covered in pointed wood shingles. Queen Anne ornamentation is evident in trim details, columns, and curvilinear wall planes. Rectangular wood multilight windows in a 25 over 1 arrangement adorn the third floor of the tower. Both east and west elevations are asymmetrical with large projecting bay sections. The house was converted to a duplex in 1932 and to apartments in 1939. The house has been returned to single family use.

Statement of Significance

The H.S. Kirkendall House was constructed in 1893 for shoe salesman and real estate broker, H. S. Kirkendall and his family. The architect is unknown, but the Queen Anne style retains typical features including a three story tower, a variety of shingles, and an effort to avoid flat surfaces. The house was constructed during the district's period of significance and it retains sufficient integrity to contribute to the district.

This 2.5 story residence was designed in the Colonial Revival style with a hipped roof, shallow boxed eaves, and distinct double pedimented fullwidth porch supported by turned columns. The front door features a large glass upper panel detailed with surrounding small square and rectangular panes. A similar window is centered on a projecting bay on the east elevation. The house is mostly covered in horizontal siding but it retains original patterned shingles on the hipped dormer and entry pediment. On the first floor of the primary façade a series of three rectangular windows line a shallow angular projecting bay. Most of the original windows have been replaced with vinyl units.

Statement of Significance

The George and Jenette McKenzie House was constructed in 1893 for building contractor George McKenzie and his family. The house was constructed during the period of significance, it retains its Colonial Revival styling in the Foursquare form with its hipped roof and full width porch with pedimented entryway, and it retains sufficient integrity to contribute to the district.

Classification: Contributing				

This 2.5 story residence was designed in the Dutch Colonial Revival style with rusticated granite detailing and two towers emulating a castle. This residence presents a unique gambreled roof and a recessed porch defined by a Syrian arch spans the primary facade. The rough-cut granite contrasts with the second and third stories which are covered in wood shingles. The symmetrically balanced window placement within the gambrel north façade is anchored by the heavy stone of the first floor. Original multisash windows are centered on the second and third floor. The west elevation is dominated by a large steeply-pitched gable wing with cornice returns. North of the gable is a three story turret topped with crenellations that are typical on medieval castle embattlements and a popular device of the Romanesque Revival style. The east elevation is completely covered in stone and features a central 2 story tower with conical roof. To the south is a large projecting bay window that is circular in shape.

Statement of Significance

The B.L. Gordon house was constructed in 1895 for prominent grocery wholesaler B.L. Gordon. The house was subsequently owned by Thaddeus S. Lane, a telephone company executive who built a chauffeur quarters on the property. The house is architecturally sophisticated. It was designed by notable Spokane architect John K. Dow in a style that is a combination of Richardsonian Romanesque and Dutch Colonial Revival style with rusticated stonework, towers, conical roofs, and a Syrian arch but he also incorporated a gambrel roof, a departure from the typical Romanesque form that creates a unique house unlike any other in Spokane. The house was constructed during the period of significance and it retains sufficient integrity to contribute to the district.

Physical Description

This 1.5 story residence was remodeled into the Dutch Colonial Revival in 1938 (Newspaper). More than half of the primary façade is dominated by the side gambrel roof which covers the entire second story. The second story is slightly overhung on all sides which is an uncommon but distinct Colonial Revival element that gained popularity in the 1930s. The first floor is covered in painted brick and the gable ends are covered with wood shingles. There two windows on either side of the Adam-inspired porch, arched on the west side and rectangular on the east side. Three equally spaced shed dormers protrude from within the gambrel roof and are adorned with a pair of rectangular multi-light windows.

Statement of Significance

The B.L. Gordon Garage was constructed in 1895 as an auxiliary barn building and it was expanded before 1910 for prominent grocery wholesaler B.L. Gordon. Carl Southwick purchased the building in 1938 and remodeled it extensively when he converted it into the Carlola Apartments. The building is a good example of the district's transition from large low density mansion development to medium-density apartment development. The house was constructed and converted during the period of significance and it retains sufficient integrity to contribute to the district.

This 2 story residence was designed in the Queen Anne style with a wraparound porch, spindlework detailing, and diamond shaped shingles in the gable ends. The primary façade is presented in an asymmetrical form with a complex roof with secondary gables. The house features multiple square and beveled bays that are typical of the Queen Anne style. The house is covered in narrow horizontal wood siding. Tall rectangular wood windows line the first floor and rectangular wood windows are located on the bays and gable ends of the upper floors. The west elevation features a cross gable, an angled projecting bay, and a second floor porch. The house was converted to multifamily use in 1945 and has since been returned to single-family use. When it was returned to single-family, the bay window, window units, and the porch were reconstructed to its original appearance.

Statement of Significance

The Renstrom-Leigh House was constructed in 1895 for teamster and wholesale grocer Gustaf Renstrom. In 1899, Walter Leigh, a prominent attorney purchased the house. The architect is unknown, but the Queen Anne style is evident through features including multiple gables, projecting bays, and spindlework. The house is individually listed on the Spokane Register of Historic Places, it was constructed during the period of significance, and it retains sufficient integrity to contribute to the district.

Physical Description

This 2.5 story residence on a corner lot was designed in the Queen Anne Free Classic style with a cross gabled roof and an octagonal tower on the east end. A porch wraps around the west end of the primary façade and is supported with groups of square columns with decorative brackets at the corners. A similarly designed second floor porch is located in the northwest corner. The first floor is covered in horizontal wood siding and the top story and gable ends are covered in stucco with half-timbering details. The house retains one multi-light transom window on the porch and the dormer ends feature distinct window trim with replacement windows. The house was converted to multifamily in the 1920s.

Statement of Significance

The residence was constructed in 1895 in the Queen Anne Free Classic style. The house conveys its Queen Anne Free Classic styling through its wraparound porch, distinct trim detailing, half-timbering, and octagonal tower. The styling appears to be transitional between the more decorative Queen Anne and moves toward the more subdued Arts and Crafts style. The house was constructed during the district's period of significance and it retains sufficient integrity to contribute to the district.

This 2.5 story residence on a corner lot was designed in the Queen Anne Free Classic style with a bay window and wraparound porch. The primary façade features a hipped roof and lower cross gable typical of the Free Classic style. A wraparound porch supported with grouped and paired simple square wood columns and marked by a pediment with cornice returns over the door. The house is covered in horizontal wood siding with wood shingles on the dormers. Windows on the house feature a distinct transom throughout. The south elevation features a gable end with a projecting bay below. The house was converted to multi-family use in 1927 but it has since been returned to single family use.

Statement of Significance

The Thomas J. Graham House was constructed in 1895 for mining investor and real estate broker Thomas J Graham. The Queen Anne Free Classic house retains typical features including hipped roof with lower cross gable, projecting bays, and classical elements and lacks the complex and delicate detailing of the earlier Queen Anne style. The house was constructed during the district's period of significance, it is individually listed on the Spokane Register of Historic Places, and it retains sufficient integrity to contribute to the district.

Physical Description

This 2.5 story residence on a corner lot was designed in the Queen Anne Free Classic style. The house features a typical steeply pitched cross gabled roof with a distinct shed dormer north of the cross gable. A fullwidth porch supported with large square shaped columns spans the primary façade. The first floor is covered in vinyl siding, the second floor is covered in horizontal wood siding, and the gable ends are covered in wood shingles. A number of multi-light window remain on the second floor. The house was converted to multifamily in the 1920s.

Statement of Significance

The residence was constructed in 1895 in the Queen Anne Free Classic style with typical features including steeply pitched cross gable, shingle siding, and full-width front porch. The house was constructed during the district's period of significance and it retains sufficient integrity to contribute to the district.

Plan: S	Siding: S	Windows: E	Porch: M	
Classificatio	n: Contributing			

This 1 story cottage is designed in a Vernacular style featuring a hipped roof with a projecting front gable. The house is supported on a foundation constructed of rubble basalt with sections that have been covered in concrete. A small porch is tucked under the flared eaves of the front gable. The house originally featured a larger porch on the east end but it was enclosed to enlarge the living space (Building Permits). The first floor is covered in horizontal siding and the gable end is covered in wood shingles. There are two plate glass windows on the primary façade, one on each side of the front door.

Statement of Significance

The Clara and Frederick W. Knowles House was constructed in 1899 in a vernacular style with a hipped roof, gable front, and shingle siding. Frederick Knowles was a prolific building contractor and carpenter who arrived in Spokane in 1887, and it is likely that he constructed this cottage. The house was constructed during the district's period of significance and it retains sufficient integrity to contribute to the district.

Architect: Unknown		Builder: Unknown	
Style 1: Colo	nial Revival	Form: Two Story House	
Plan: S Siding: S		Windows: M	Porch: M
Classification	n: Contributing	-	

Physical Description

This 2 story residence was designed in the Colonial Revival style with a hipped roof and central pediment. The plan is rectangular with the long side facing the street and the original design was symmetrical. A 1 story front gabled addition was constructed on the west end of the primary façade in 1950 (Building Permits). Sunburst detailing and turned columns were added in a 2000s remodel. The windows appear to have been replaced with vinyl units.

Statement of Significance

The residence was constructed in 1899 for the McLachlan family. The Colonial Revival styling is evident in the hipped roof and pedimented entryway. The house was constructed during the district's period of significance and it retains sufficient integrity to contribute to the district.

Architect: U	Jnknown	Builder: Unknown	
Style 1: Art	s & Crafts	Form: Two Story House	
Plan: I	Siding: I	Windows: I Porch:	Ι
Classificatio	on: Contributing		

This 2 story residence was designed in the Arts & Crafts style with a brick clad first floor and wood shingle sided second level and attic. The plan is square and the house sits well above street level and is nearly invisible from 6th Avenue. The house features a front gable roof with a distinct loggia arcaded full-width front porch on the north façade supported by a solid half wall. The second story slightly overhangs the first floor with exposed rafters and unenclosed eaves. Large dormers are found on the west elevation. An angled bay window with hipped roof is found at the rear of the west elevation. The east elevation is not visible. The house was converted to multifamily in 1957, it has included 4 apartments since that time.

Statement of Significance:

The Brook House was constructed in 1902 for the president of the Washington Brick & Lime Manufacturing Company, Henry Brook, in partnership with S & J Rosenhaupt (real estate developers) for a cost of \$2400. Mr. Brook was also an original owner of the Spokane Hotel Building at the corner of Stevens and First. Their daughter, Mrs. Mark Mendenhall and family lived in the house after the deaths of both parents in 1908. Owner W S McCrea (husband of another Brook daughter) took out an alteration permit in 1912 for \$2100 with work designed by Juat & Rigg. The McCrea's lived there until 1950. The house was converted by owner R L Dunlap to four apartments on 2/21/1957. The architect is unknown, but the Arts & Craft styling is distinct and intact. The house was constructed during the district's period of significance, it is completely intact on the exterior, and it contributes to the district.

This 2.5 story residence was designed in the Colonial Revival style with an asymmetrical three story form. The house is located on a corner lot and it is oriented toward the corner in a way that creates two street-facing facades. The house features an angular dormer resembling a rooftop cupola, over-hanging eaves, and a porch wrapping around the northeast corner with a ped-iment over the angled staircase. The house is covered in painted shingle siding. The house retains most of its original wood windows including an arched window bookended by square windows centered on the gable end. The rooftop cupola has been expanded further to the west. An angular bay with wood multi-light windows projects from the first floor.

Statement of Significance

The James Fitzpatrick House was constructed in 1901 for the manager of the Spokane Iron Works Company, James M. Fitzpatrick and his family. The house was designed by the noted firm Cutter & Malmgren and the Colonial Revival house retains typical features including the distinct asymmetrical form and rooftop cupola. The house was constructed during the district's period of significance and it retains sufficient integrity to contribute to the district.

Physical Description

This 1.5 story residence was designed in the Colonial Revival style. The plan is rectangular with a side gabled roof and a single dormer with a steeply-pitched roof and cornice returns centered over the primary entrance. The house is covered in wood shingle siding. Large square multilight wood windows are situated on each side of the front door. The south elevation features an off center chimney balanced by a projecting bay with a large square multi-light wood window.

Statement of Significance

The Houston School was constructed in 1903 as an Episcopal college preparatory boarding and day school for boys. This building is labeled as "Classrooms" on the 1910 Sanborn Map. The school remained in operation until 1917 when the Episcopal Church closed. The school buildings and property were sold in 1924 and the classrooms were converted to a single family residence. The Colonial Revival house retains typical features including its side gabled roof and cornice returns. The house was constructed during the district's period of significance and it retains sufficient integrity to contribute to the district.

This 3.5 story building retains Colonial Revival style and its prominence in the streetscape. The plan is L-shaped with the long section facing the street and a smaller service wing extending toward the alley. The primary façade is presented in a symmetrical form with a side gabled roof and two dormers on each side of a front gable and an overhung porch supported by classical columns. Colonial Revival styling is evident in the pediment entryway and deep cornice returns on the front gable and both side gables. The first floor is elevated on a concrete foundation and a daylight basement is accessed by a separate entrance on the west elevation. The building was originally brick and wood siding that was covered in stucco when it was converted to apartments in 1923. Tall rectangular wood windows line all three floors and are centered on the gable end and dormers. The dormer windows have a distinct multi-light configuration. The west elevation includes an external fire escape.

Statement of Significance

The Houston School was constructed in 1903 as an Episcopal college preparatory boarding and day school for boys. The school remained in operation until 1917 when the Episcopal Church closed the school and converted the building to a children's house. The building was converted to apartments in 1923. The Colonial Revival building retains typical features including deep cornice returns and a pedimented entryway. The building is a distinct example of converting larger structures into apartments in the district during the period of significance. The house was constructed and converted during the district's period of significance and it retains sufficient integrity to contribute to the district.

This 1.5 story residence was designed in the Craftsman style featuring deep overhanging eaves, full width overhung porch, square columns, and a distinct double gabled dormer. The house is covered in horizontal wood siding. Most windows have been replaced with internal grid replacement units. Two first floor windows, one with a transom and a small bay window, appear to be original. A basalt chimney rises from the center of the house.

Statement of Significance

The Favre House was constructed in 1903 in the Craftsman style for Eugene B. Favre and his family. The house was constructed by prolific builder Aaron L. Lundquist, who lived in the house for a short time before selling it to the Favre family. It exhibits Craftsman features including a basalt chimney, full width front porch, and double gabled dormer. The house was constructed during the district's period of significance and retains sufficient integrity to contribute to the district.

This 2 story residence was designed in the Queen Anne style with Shingle influence. The plan is a modified rectangle. The west-facing primary façade is presented in a mostly symmetrical form with a cross gabled roof with a recessed arch on the front gable and a pedimented entryway on the south end. The first floor is covered in asbestos siding and the top floor and gable ends are covered in painted wood shingles. There are two front doors, one facing west on the primary façade and a north-facing door on the porch. A pair of vinyl windows are centered on the first floor and gable end and all of the windows on the house appear to be vinyl replacements. The north and south elevations are asymmetrical in form and are dominated by the large cross gable with a similar recessed arch as the front gable. A porch was enclosed on the southeast corner likely when the house was converted to a duplex in the 1940s.

Statement of Significance

The Levi and Sarah Monroe Guest Cottage was constructed in 1903 for newspaper man and Chamber of Commerce Secretary Levi Monroe and his wife Sarah. The couple may have lived here while their house at 1427 W 6th Ave was constructed, but it was subsequently rented out as a single family house. Sarah Monroe lived in the cottage during the 1920s while her husband was working for the United States Government in Brazil. The residence designed in the Queen Anne style with Shingle influences features shingle siding with distinct recessed arches in the gable ends. The house was constructed during the district's period of significance and it retains sufficient integrity to contribute to the district.

Physical Description

This 2 story residence was designed in the Queen Anne Free Classic style with a side gabled roof. The roof is metal. The house is situated on an elevated lot and it visibility from the street is limited. The primary façade is presented with a pair of gable roof dormers and an overhung porch is situated on the east end. A second floor porch is tucked beneath the double gable. The first floor is covered in horizontal wood siding and the gable ends are covered with painted wood shingles.

Statement of Significance

The residence was constructed in 1905 by building contractors Burns & Hall. It is listed for rent in 1908; a duplex as early as 1923; and was converted to a triplex before 1958. In 1908, the house was purchased by E J Johnson and family. The house was designed in the Queen Anne Free Classic style and it retains typical elements including shingle siding, double gable dormer, and stickwork porch balustrade. The house was constructed during the period of significance and it retains sufficient integrity to contribute to the district.

Physical Description

This 2 story residence was designed in the Queen Anne style but it has been heavily remolded. The plan is rectangular with a cross gabled roof and a recessed porch supported with iron railing. The first floor is covered with horizontal metal siding that was added in the 1960s, and the second floor and gable ends are covered in vertical wood siding. Two primary entrances are located under the recessed porch and the north section of the porch has been enclosed to accommodate apartment units. The windows appear to have been replaced with metal units. Both south and north elevations are dominated by a large cross gable. The house was converted to multifamily in 1964.

Statement of Significance

The residence was constructed in 1904 in the Queen Anne style but it has been heavily remodeled. The house was constructed during the district's period of significance, but it has experienced substantial changes to the siding, windows, and porch that were completed after 1955 and therefore it does not retain sufficient integrity to contribute to the district.

Plan: I	Siding: I	Windows: E	Porch: E		
Classification: Contributing					

This 2.5 story residence was designed in the Arts and Crafts style. The plan is rectangular with a cross gabled roof and a gable dormer on the primary facade. A metal awning covers the primary entrance that is accessed by a set of concrete stairs. The porch originally stretched from the door to the northeast corner but was enclosed to accommodate additional units. The first and second floor is covered in horizontal wood siding and the top halves of the gable ends and dormers are covered in stucco with half-timbering details. The house has a combination of replacement and original wood windows including a square multi-light wood window west of the front door. The house started operating as boarding house in the 1940s and the living space was expanded in 1953.

Statement of Significance

The house was built in 1904 in the Arts and Crafts style. In the 1940s the house was operated as a boarding house where rooms were rented and bathrooms were shared. The house retains typical elements including half-timbering details and a varied roofline. The house was constructed during the district's period of significance and it retains sufficient integrity to contribute to the district.

Physical Description

This 1.5 story residence was designed in the Arts & Crafts style featuring deep overhanging eaves, full width overhung porch, square bracketed columns, and matching shed dormers. The house is covered in horizontal wood siding with a bellyband dividing the floors. The house retains all of its wood windows with unbalanced 30|70 sash. The upper sash on all windows have a variety of divided light configurations over a single pane lower sash. An all basalt chimney rises from the west elevation with two small flanking multi-light windows which likely bookend the fireplace on the interior.

Statement of Significance

The house was constructed in 1904 in the Craftsman style. It exhibits typical features including basalt chimney, multi-light wood windows and full width front porch. The house was constructed during the district's period of significance and retains sufficient integrity to contribute to the district.

This 1.5 story residence was designed in the Craftsman style with deep overhanging eaves with exposed rafter tails, a flared hipped roof, and basalt masonry. The house features a roof with flared eaves and four similar hipped roof dormers on each elevation. An overhung full-width front porch with large square basalt columns and solid basalt wall contains two bay windows and the entry door. Both north and south elevations feature bump outs to accommodate interior features. The first floor is covered in horizontal wood siding and the dormers are covered with painted wood shingles. The north facing dormer contains a decorative circular window.

Statement of Significance

The G.W. Roberts House was built for physician and surgeon Dr. G. W. Roberts and his family in 1904. The house was designed in the Craftsman style with typical features including a low pitched roof, flared eaves, and use of basalt. The house was constructed during the district's period of significance and it retains sufficient integrity to contribute to the district.

Physical Description

This 2.5 story residence was designed in the Queen Anne style with intricate detailing. The plan is rectangular with a cross gabled roof and tower. The house features an overhung porch supported with classical columns and a pedimented entryway over the front door. The west end of the porch has an octagonal protrusion that forms a 2 story tower with an octagonal second floor porch. The first floor and second floor are covered in horizontal wood siding and the gable ends are covered in painted wood shingles. About half of the windows appear to be vinyl replacement units including two internal grid windows on the primary façade. The west elevations is dominated by a cross gable with a pedimented gable end.

Statement of Significance

The Levi Monroe House was constructed in 1904 for newspaper editor and chamber of commerce secretary Levi Monroe and his family. The Queen Anne Free Classic house retains typical features including multiple gables at different heights, a second story porch, and an effort to avoid flat surfaces. The house was constructed during the district's period of significance, it is individually listed on the Spokane Register of Historic Places, and it retains sufficient integrity to contribute to the district.

This 2 story residence was designed in a vernacular style. The plan is rectangular with a front gabled roof, gabled roof dormers and a small overhung porch supported with classical columns. The first floor is covered in painted siding and the gable ends are covered in painted horizontal wood siding. Most of the windows have been replaced and it appears that some of the window openings have been modified. An addition projects from the back of the house on the south elevation. The house was originally constructed as a three story residence but the top floor was removed in 1932. The house was then converted to a triplex in 1957.

Statement of Significance

The house was constructed in 1904 and has served as a boarding house or apartments since the 1920s. The house is a simple vernacular design and some changes have been made to the plan, windows and siding, but the house constructed and converted during the period of significance and it retains sufficient integrity to contribute to the district.

Physical Description

This 2.5 story residence was designed in the Craftsman style but it has been substantially remodeled. The plan is rectangular with a hipped roof, hipped dormer, and an overhung porch supported by classical columns on basalt walls and a pedimented entryway. The house is covered in horizontal vinyl siding. The windows appear to have been replaced with metal units. The east elevation has a protruding addition with a secondary entrance to provide an emergency exit for institutional use. The house was converted to an alcohol rehabilitation facility in 1958. A substantial remodel was completed after 1977 when much of the Craftsman detailing was removed including exposed rafter tails and brackets supporting the projecting bays.

Statement of Significance

The house was constructed in 1904 in the Craftsman style but was substantially remodeled sometime after 1977. It was converted to an alcohol rehabilitation hospital in 1958, after the period of significance, and it does not retain sufficient integrity to contribute to the district.

This 1.5 story residence was designed in the Craftsman style. The plan is a modified rectangle with a front gabled low-pitched roof and a recessed porch supported with square columns and detailed wood work on the west end. The house is supported on a basalt rubble foundation. The bottom third of the first floor is covered in painted wood shingles and the second third of the first floor is covered in horizontal wood siding. The gable ends are covered in painted wood shingles with a bellyband of detailed shingles at the top of the first floor. There is a rectangular wood multi-light window on first floor, and a single rectangular wood window centered on the gable end. The west elevation includes a dormer and brick chimney.

Statement of Significance

The house was constructed in 1904 in the Craftsman style and it retains typical features including a low-pitched roof, basalt foundation, and recessed porch. The house was constructed during the district's period of significance and it retains sufficient integrity to contribute to the district.

Physical Description

This 2 story residence was designed in the Dutch Colonial Revival style. The plan is square shaped and the house sits on an elevated site. The primary façade is with a cross gambreled roof and an overhung porch that is supported with square columns. The cross gables are not gambrel style like the front gable indicating that they may be additions. A second story porch is recessed in the front gable with rounded gable walls. The house is covered in horizontal wood siding. An entry door is situated to the east end of the primary façade with a square wood window to the east of the door and a rectangular multi-light window on the west end of the primary façade. Four rectangular wood windows are evenly spaced on the second floor. The east and west elevations are dominated by the cross gable. The house was converted to apartments in the 1940s and additional changes were made in 1951.

Statement of Significance

The John F. Miller House was built in 1905 for John F. Miller and his family. The house is designed in the Dutch Colonial Revival style with typical features including a gambrel roof and recessed second floor porch. The house was constructed and modified during the district's period of significance and it retains sufficient integrity to contribute to the district.

Classification	n: Contributing		

This 2 story residence was designed in the Colonial Revival style. The plan is rectangular with a side gabled roof with deep cornice return, a large pedimented front gable, and an overhung porch supported by Classical columns. A small second floor balcony is centered on the front gable with angled dormer walls and a decorative balustrade. The first floor is covered with horizontal wood siding, the porch façade is covered in detailed shingles, and the top floor and dormer are covered with asbestos siding. The house retains most of its original wood windows including a three part window on the primary façade with unbalanced sash on the large center window which creates a transom effect. The south elevation has a dormer addition on the second floor.

Statement of Significance

The residence was constructed in 1905 in the Colonial Revival style and it retains typical elements including its side gabled roof with deep cornice returns, classical columns, and its pedimented dormer with second floor balcony. The house was constructed during the district's period of significance and it retains sufficient integrity to contribute to the district.

Physical Description

This 2 story residence was designed in the Craftsman style. The plan is rectangular with a side gabled roof with overhanging eaves and cutout detailing on the bargeboard and a large front gable lined with multi-light wood windows. The house has a recessed porch supported by narrow square columns atop concrete walls. It appears the porch was modified. The first floor is covered in horizontal wood siding, and the second floor and gable ends are covered with unpainted wood shingles. The house retains its original wood windows including a three part window on the primary façade with unbalanced sash on the large center window which creates a transom effect. The house appears to have an addition on the rear.

Statement of Significance

The house was constructed in 1905 in the Craftsman style and it retains typical features including unpainted shingles, bargeboard detailing, and overhanging eaves. The house was constructed during the district's period of significance and it retains sufficient integrity to contribute to the district.

Physical Description

This 2 story residence was designed in the Craftsman style. The plan is rectangular with a side gabled roof with flared eaves and deep cornice returns and a large front gable with cornice returns and a small overhang at the top of the gable end. The house has an overhung porch supported by square wood columns with eyebrow shaped trim between the columns. The first floor is covered with horizontal wood siding and the top floor and dormer are covered with painted wood shingles. The house retains its original wood windows including a three part window on the primary façade with unbalanced sash on the large center window which creates a transom effect. A fantail or sunburst detail crowns the front gable.

Statement of Significance

The residence was constructed in 1905 in the Craftsman style and it retains typical features including its side gabled roof, square columns, full length porch, and overhung gable end. The house was constructed during the district's period of significance and it retains sufficient integrity to contribute to the district.

This 1.5 story residence was designed in the Craftsman style. The plan is rectangular with a side gabled roof and a distinct shed dormer with a peaked center. The house has an overhung porch supported by square wood columns and a simple balustrade. The house is supported on a painted rubble basalt foundation. The house is covered with painted wood shingles. The house appears to retain its original windows including three rectangular wood windows that line an angular projecting bay on the east end of the façade. Three rectangular multi-light wood windows are centered on the dormer with two square multi-light wood windows on each end of the dormer.

Statement of Significance

The residence was constructed in 1905 in the Craftsman style but it retains distinct features like the pointed shed dormer and the angular projecting bay. The house was constructed during the district's period of significance and it retains sufficient integrity to contribute to the district.

Physical Description

This 2 story residence was designed in the Craftsman style. The plan is rectangular and the house is located on a corner lot. The south-facing primary façade is presented with a front gabled roof and shed dormers with exposed rafter tails and a recessed porch supported by four square columns. The house including the columns is covered in horizontal vinyl siding with the exception of shed dormers which are covered with wood shingles. The house features a combination of replacement vinyl windows and original wood windows. The house was converted to a duplex in the 1930s and a secondary entrance with a gabled entryway was added on the east elevation. The secondary entrance feels like a primary entrance and the house has addresses on both Lincoln and 9th Avenue.

Statement of Significance

The house was constructed in 1905 in the Craftsman style and it retains typical features including shed dormers, exposed rafter tails and brackets. The house was constructed during the district's period of significance and it retains sufficient integrity to contribute to the district.

This 1.5 story residence was designed in the Craftsman style with a rubble basalt foundation, widely overhanging eaves with exposed brackets and mixed cladding on the first floor of both narrow wood siding above and wood shingles on the lower 1/3. The second level consists of shingles on the dormers and lower half of the front gable, and horizontal wood siding at the peak of the gable. The plan is rectangular and the house fronts onto 9th Avenue and is most visible from Lincoln Place. The second story overhangs the a full-width front porch. One large dormer is visible on the west elevation and is located above an oriel bay window at the first floor. The rear of the house has a hipped roof and includes another large gabled dormer. A basement level garage is at the north end of the house and is accessible from Lincoln Place.

Statement of Significance:

The house was built for Sidney A. and Shirley Child in 1904-5. By 1919, the Claude R Hill family was living there and remained until at least 1964 when Claude died at age 92. Mr. Hill was an engineering consultant for the US Steel Corp. and helped build several Spokane landmarks including the Davenport Hotel, the Spokane Club, and the Grand Coulee Dam. The architect is unknown, but the Craftsman styling of the house is intact. The house was constructed during the district's period of significance, it is intact on the exterior, and it contributes to the district.

Physical Description

This 1.5 story residence was designed in the Craftsman style. The plan is rectangular and the house is situated on an elevated site. The west-facing primary façade is presented with a hipped roof and a large front gable with overhanging eaves and brackets. The house has a recessed porch supported by four narrow square bracketed columns. An attached garage constructed in 1938 is located on the north end of the façade and is slightly below grade. The first floor is covered in horizontal wood siding and the gable end and garage are covered with painted wood shingles. The windows have been replaced with internal grid vinyl units. The house was converted to apartments in the 1930s.

Statement of Significance

The house was constructed in 1905 in the Craftsman style and it retains typical features including overhanging eaves with brackets and a full length front porch with bracketed columns. The house also features a garage addition with creative below grade placement which is a symbol of the transition from the horse-drawn to the automobile era. The house was constructed during the district's period of significance and it retains sufficient integrity to contribute to the district.

Physical Description

This 2 story residence was designed in an English Arts and Crafts design mode. The plan is irregular shaped and the house is situated back from the street. The primary façade is presented with a steeply pitched cross gabled roof and an overhung porch supported by square columns. A balcony is located above the front porch and balconies are located on both north and south elevations. The first floor is covered in horizontal wood siding, and the second floor and gable ends are covered with painted wood shingles. The upper sections of the gable ends feature intricate stick work with exposed rafter tails and brackets. The house feature wood multi-light windows with diamond shaped lights. Small picturesque dormers protrude from the cross gabled roof.

Statement of Significance

The Carson-Clemmer-Larrabee House was constructed in 1905. Designed by architect John K. Dow, the English Arts and Crafts residence features protruding wings and balconies and picturesque elements like the stick work and dormer. The house was constructed during the district's period of significance, it is individually listed on the Spokane Register of Historic Places, and it retains sufficient integrity to contribute to the district.

This 1.5 story residence was designed in the Craftsman style. The plan is a modified rectangle with the shorter side facing the street and the house is situated on an elevated site. The west-facing primary façade is presented with a front gabled roof and a recessed porch supported with a square column. The roofline is punctuated with a wide bargeboard that includes cutout detailing. The house originally featured a full length recessed front porch according to Sanborn Maps. The house is supported on a basalt rubble foundation. The house is covered in alternating bands of unpainted wood shingled and horizontal wood siding. There is a rectangular wood multi-light window and a smaller rectangular window on first floor, and a single rectangular wood window centered on the gable end. The east and west elevations are mostly symmetrical with a dormer and brick chimney on the west elevation.

Statement of Significance

The house was constructed in 1905 in the Craftsman style and it retains typical elements including basalt foundation, low slung roof, and bargeboards with cutout detailing. The house was constructed during the district's period of significance and it retains sufficient integrity to contribute to the district.

The 1.5 story residence was designed in the Craftsman style. The plan is rectangular with a front gabled roof and a recessed porch supported by tapered square columns in the center and square basalt columns on the corners. The house is supported on a raised foundation constructed of rubble basalt that extends down the hill toward the street to surround a concrete staircase, and to form a retaining wall and garage. The garage was constructed in 1910 at the front of the property due to the hillside location and lack of an alley. The first floor and gable end are covered in horizontal wood siding with painted detailing and exposed beams above the first floor plane. A rectangular multi-light window is aligned on both sides of the front door and a rectangular window with diamond-shaped divided lights is centered on the gable end. There is a gabled dormer projecting from the roof on the west elevation with a large brick chimney rising from the basement.

Statement of Significance

The Hazel and J.R. Babcock Jr. House was constructed in 1905 for a newlywed couple of prominent Spokane families. J.R. was the son of prominent lumberman J.R. Babcock Sr., and Hazel was the granddaughter of E.J. Brickell. The house was constructed during the district's period of significance and it retains sufficient integrity to contribute to the district.

Physical Description

This 1.5 story residence was designed in a vernacular style with some Craftsman elements. The plan is rectangular with the shorter side facing the street. The north-facing primary façade is presented with a low pitched front gabled roof and a recessed and overhung porch supported by square wood columns. A brick chimney rises from the west end of the roof. The house is covered in painted wood shingles. A singe rectangular wood window and small square window are located to the east of the front door and a series of rectangular wood windows are to the west of the door. A single metal window is centered on the gable end with a gable vent centered above. A projecting bay is situated on the east side.

Statement of Significance

The Cruzan-Martindale House was constructed in 1905 for Unitarian Church pastor J.A. Cruzan and his wife. After less than a year, they sold the house to clothing store owner Merrill Martindale and his family who lived their until the late 1920s. The house retains typical elements including a low slung porch and square porch columns. The house was constructed during the district's period of significance and it retains sufficient integrity to contribute to the district.

Physical Description

This 2 story residence was designed in the Craftsman style with Tudor Revival elements. The plan is rectangular with a side gabled roof and two different sized front gables defining and an overhung porch. The porch originally stretched the full length of the primary façade but in 1922 the north and south sections were enclosed to form two sunrooms lined with rectangular multi-light wood windows. The first floor is covered in horizontal wood siding and the second floor and gable ends are half timbered with stucco between the beams. Two multi-light windows are directly adjacent to the front door and two rectangular wood multi-light windows are centered on the gable ends. All the windows feature distinctly shaped lintels. The east elevation features shed dormers projecting from the roof. The north elevation includes a basement level garage that was added in 1929.

Statement of Significance

The house was constructed in 1906 for Charles and Estella Pattullo by architect William J. Ballard and contractor Chamberlin Real Estate & Improvement Company. The house was designed in the Craftsman style and it retains typical features including half-timbering, basalt construction, and distinct window lintels. The house was constructed during the district's period of significance, it is individually listed on the Spokane Register of Historic Places, and it retains sufficient integrity to contribute to the district.

Style: Tudor F	Revival	Form: Two Stor	y House
Plan: I	Siding: I	Windows: I	Porch: I
Classification:	Contributing (Lis	sted on the SRHP or	n 7/10/2006)

This 2 story residence was designed in the Tudor Revival style. The south-facing primary façade is presented in an asymmetrical form with a side gabled roof with secondary gables and dormers and an overhung porch supported with square shaped columns. The first floor is covered in horizontal wood siding and the gable ends and dormers are covered in stucco with half-timbering details. The front door is centrally located with rectangular wood windows on each side of the door and a larger rectangular window on the west end of the porch. Two rectangular wood windows are on the east end of the façade with a matching pair above on the second floor. Three more rectangular wood windows line the rest of the second floor and small square are located on the gable tops and dormers. Both east and west elevations are asymmetrical.

Statement of Significance

The Shadle-Veasey House was built in 1904 in the Tudor Revival style for newlyweds Eugene and Josie Shadle. The Shadles sold the house to the Veasey family in 1911 and they lived in the house until 1975. The house was constructed during the district's period of significance, its Tudor Revival styling with half timber details and secondary gables contributes to the district, and the house retains sufficient integrity.

Classification: Co	ontributing			

Physical Description

This 2 story residence was designed in a Vernacular style. The plan is square shaped and the house is situated on a slightly elevated site. The north-facing primary façade is presented in a mostly symmetrical form with a side gabled roof with a large dormer with cornice returns. The house is supported on a rubble basalt foundation. The house is covered in replacement horizontal wood siding but some of the original narrow horizontal wood siding remains exposed on the west end of the porch balustrade. The front door is on the east end of the façade with a large rectangular wood multi-light window on the west end. Three multi-light wood windows are centered on the dormer. The east and west elevations are mostly symmetrical with a brick chimney rising from the north end of the west elevation. The house was converted to apartments in 1949.

Statement of Significance

The Fallis-Sengfelder House was constructed in 1906 in the Craftsman style for J.B. Fallis and his family. After living in the house for less than a year, the house sold to businessman Fred Sendfelder and his family. The house retains typical elements including full length porch, multi light windows, and cornice returns. The house was constructed during the district's period of significance and retains sufficient integrity.

Plan: I	Siding: I	Windows: I	Porch: I
Classification: (Contributing		

This 2 story residence was designed in the Neoclassical style. The plan is rectangular with the shorter side facing the street and the house is located on a corner lot. The west-facing primary façade is presented in a symmetrical form with a front gabled roof with a large pediment and a 2 story overhung porch supported by four massive Classical columns. A small second floor balcony is centered on the second floor. The house is covered in horizontal wood siding with a distinct detail in the pediment. Four rectangular windows, some original and some replacements, are equally spaced across the facade with a centrally located front door. Some of the original wood diamond shaped multi-light windows remain on the primary façade. The south elevation includes a pedimented dormer and a brick chimney.

Statement of Significance

The Earl Crane House was constructed in 1906 for shoe store owner Earl Crane and his family. The house was designed by John A. Creutzer in the Neoclassical style and was constructed by Aaron L. Lundquist. The house retains typical features including classical columns and a massive pedimented gable end. The house was constructed during the district's period of significance and it retains sufficient integrity to contribute to the district

This 2 story residence was designed in the Craftsman style with Swiss Chalet influences. The plan is rectangular with the shorter side facing the street and the house is situated on an elevated site. The south-facing primary façade is presented in a symmetrical form with a low pitched front gabled roof and a recessed and overhung porch supported by square columns atop basalt walls. A projecting angular multi-light bay window is centered on the gable end and is evocative of a balcony. The first floor is covered in horizontal wood siding and the top floor and gable end are covered with unpainted wood shingles. The front door is located on the west end of the façade and a series of rectangular wood multi-light windows is located to the east. The east and west elevations are asymmetrical and feature a cross gable.

Statement of Significance

The house was constructed in 1906. Although the architect is unknown, the Craftsman styling with Swiss Chalet influences like unpainted shingles, the cutout bargeboard, and exposed brackets make a significant contribution to the district. The house was constructed during the district's period of significance and it retains sufficient integrity to contribute to the district.

Physical Description

This 2 story residence was designed in the Craftsman style. The plan is a modified rectangle with the shorter side facing the street. The south-facing primary façade is presented in a symmetrical form with a cross gabled roof, shed dormers and a recessed porch supported with square columns. A large addition to the back of the house was constructed in 1937. The house is supported on a basalt foundation. The first floor is covered in horizontal wood siding and the gable ends are covered with asbestos siding. The front door is centrally located in a projecting bay and there are different size rectangular wood windows with transoms on each side of the door. A rectangular multilight wood window is centered on the gable end. The east and west elevations are mostly asymmetrical with an off-center cross gable and an extra dormer on the west elevation. A brick chimney rises near the north end on the west elevation.

Statement of Significance

The Harold C. Whitehouse Residence was constructed in 1906 for J.G. Boyd. In 1913, noted Spokane Architect Harold C. Whitehouse purchased the house for his family. In 1937, Whitehouse designed an addition for the house. The Craftsman style house was constructed during the district's period of significance and it retains sufficient integrity to contribute to the district.

This 2 story residence was designed in the Craftsman style. The plan is rectangular with the short section facing the street. The north-facing primary façade is presented in an asymmetrical form with a side gabled roof and a large gabled dormer with a balcony and an overhung porch supported by square wood columns with a pedimented entryway. A brick chimney rises from the west end of the roof. The first and second floors are covered with horizontal wood siding and the dormer is covered with painted wood shingles on the sides and painted stucco with stickwork detailing on the gable tops. Two front doors are located on the east end of the porch with a square window in between. An angular projecting bay lined with rectangular wood windows is located on the west end of the porch. A door and a wood window is tucked behind the balustrade on the second floor balcony. Both east and west elevations are asymmetrical and dominated by the side gable roof. The house was converted to a duplex in 1951.

Statement of Significance

The residence was constructed in 1906. Although the architect is unknown, the Craftsman style hose was constructed during the district's period of significance and it retains sufficient integrity.

Physical Description

This 2.5 story residence was designed in the Tudor Revival style. The plan is rectangular with the short side facing the street. The south-facing primary façade is presented in a symmetrical form with a cross gabled roof with secondary dormers and an overhung porch supported with square shaped columns. The house is supported on a rubble basalt foundation and a brick chimney rises from the roof on the west end. The first floor is covered in horizontal wood siding and the second floor and gable ends are covered with painted wood shingles. Projecting stickwork detailing accents the gable ends on the primary façade and both side elevations. Three front doors are equally spaced on the porch with small square windows in between. Alternating square and rectangular wood windows line the second floor. Most of the windows appear to be original. east and west elevations are mostly symmetrical. The house was converted to apartments in 1943 (permits).

Statement of Significance

The house was built in 1906 in the Tudor Revival style. The was converted to apartments in 1943 and the WWII "government lease" program is noted on the building permit. Although the architect is unknown, the Tudor Revival styling with detailed stickwork contributes to the district. The house was constructed during the period of significance and it retains sufficient integrity.

Physical Description

This 2.5 story residence was designed in the American Foursquare style. The plan is rectangular with the short section facing the street. The north-facing primary façade is presented in a mostly symmetrical form with a hipped roof and hipped dormer and an overhung porch supported by Classical columns. The house is supported on a rubble basalt foundation and a brick chimney rises from the center of the roof. The first and second floor are covered in horizontal wood siding and the dormer is covered in painted wood shingles. A portion of the east and west facades is covered in painted stucco. On the first floor a square wood multi-light window is located west of the front door and a large transomed wood window is on the east end of the porch. Two rectangular windows are spaced apart on the second floor. The window on the east end, a vinyl replacement, is on a projecting bay window. A rectangular vinyl window is centered on the dormer. Both east and west elevations are asymmetrical. The house was converted to apartments in 1942.

Statement of Significance

The All Saints Deanery was constructed in 1906 as a residence for church leaders. Reminiscent of the "Classic Box" form of the Colonial Revival style, this house exhibits the characteristics of the American Foursquare style with its square shape, projecting bay window, and full length porch. The house was constructed during the district's period of significance and it retains sufficient integrity.

Physical Description

This 3 story residence was designed in the Colonial Revival style. The house is situated on a corner lot and the plan is rectangular. The south-facing primary façade is presented with a hipped roof with two prominent front gables and a recessed porch wrapping around the east elevation and supported with classical columns. A secondary pedimented entryway is located on the east elevation. A basement level two car garage was added on the west end of the façade and the porch was enclosed directly above. The house is covered in horizontal wood siding. The front door is centrally located under a pedimented entryway with a window to the east on the porch. A mix of wood multi-light windows and vinyl windows line the second and third floors. The third floor was originally a single hipped roof dormer that had additions constructed on both sides of the dormer. The house was converted to apartments in 1927.

Statement of Significance

The Ortho Dorman House was constructed in 1907 for newspaper man and real estate investor Ortho Dorman. The house was converted to apartments by Mrs. G.W. Bungay in 1927. The architect is unknown and the house has experienced some changes to accommodate apartments, but the Colonial Revival style remains evident. The house was constructed during the district's period of significance and it retains sufficient integrity to contribute to the district.

Plan: S Siding: E		Windows: E	Porch: I	
Classification: Contributing				

This 1.5 story residence was designed in the Craftsman style. The plan is rectangular with the long section facing the street and the house is located on a corner lot. The south-facing primary façade is presented with a side gabled roof, a shed dormer, and a full-length porch supported by square columns. The house was covered with horizontal aluminum siding in 1976 and a single story addition was added on the north elevation in 1997. The front door is centrally located with a rectangular plate glass window on each side of the door. Two rectangular vinyl internal grid windows line the shed dormer. Most, if not all, of the windows have been replaced with vinyl internal grid windows. The west elevation includes a single story addition on the north end.

Statement of Significance

The house was constructed in 1907 in the Craftsman style and it retains typical elements including its full width front porch, low pitched roof, and shed dormer. The house was constructed during the district's period of significance and it retains sufficient integrity to contribute to the district.

Physical Description

This 2.5 story residence was designed in the Craftsman style. The plan is rectangular with a hipped roof, hipped dormer and an overhung porch supported by classical columns. The house is supported on a rubble basalt foundation and a basalt and brick chimney rises up the west elevation. The first and second floor are covered in horizontal wood siding and the dormer is covered in painted wood shingles. The front door is centrally located on a projecting bay with rectangular wood multi-light windows on each side of the door. Two rectangular windows are located on each side of a second floor uncovered balcony with a door to provide access. A rectangular wood multi-light window is centered on the dormer.

Statement of Significance

The Leonard-Johnston House was constructed in 1907 by building contractor Olaf M. Lilliequist. Lilliequist sold the home to James Leonard who lived there until 1923. James Johnston bought the home in 1923 and lived there until 1948. Reminiscent of the "Classic Box" form of the Colonial Revival style, this house exhibits the characteristics of the Craftsman style with its square shape, projecting bay window, and full length porch. The house was constructed during the district's period of significance and it retains sufficient integrity to contribute to the district.

This 2 story residence was designed in the Craftsman style with Swiss Chalet influences. The plan is rectangular with a low pitched cross gabled roof and a recessed and a recessed porch supported by square columns. The porch was originally full-length but the east end was enclosed as a sunporch in 1938. A recessed and projecting second floor balcony is centered on the second floor with cutout detailing on the balustrade. The house is supported on a rubble basalt foundation. The first floor is covered with horizontal wood siding and the top floor and gable ends are covered with painted stucco between decorative stickwork. The front door is centrally located with the sunporch to the east lined with rectangular wood windows with transoms. A rectangular wood window is west of the front door. A door bookended by rectangular wood windows sits behind the balcony and one small square wood multi-light window is above and on each side the balcony. The east and west elevations are mostly symmetrical.

Statement of Significance

The house was constructed in 1907 in the Craftsman style with Swiss Chalet influences. The house retains its Craftsman styling with Swiss Chalet influences like the cutout balustrade and decorative stickwork. The house was constructed during the district's period of significance and it retains sufficient integrity to contribute to the district.

Physical Description

This 1.5 story residence is designed in a Craftsman style. The southfacing primary façade is presented with a front gabled roof and an overhung porch on the east end. According to Sanborn Maps, the house originally featured a full length front porch that was altered in 1965. The first floor is covered with horizontal wood siding and the gable end is covered in painted wood shingles. The front door is on the west end of the porch with a small rectangular vinyl window to the east. A transomed rectangular vinyl window is located on the west end of the façade, and a single rectangular window is located on the gable end. The east and west elevations feature a gable roof dormer on each side.

Statement of Significance

The house was constructed in 1908 in the Craftsman style. It retains typical elements including its low slung roof and shingle siding. The house was constructed during the district's period of significance and it retains sufficient integrity to contribute to the district.

This 1.5 story residence was designed in the Craftsman style. The plan is rectangular with the shorter side facing the street. The west-facing primary façade is presented with a front gabled roof and a recessed porch supported by large square columns. The first floor is covered in buff brick veneer and the gable end is covered with painted wood shingles. The front door is situated on the north end of the porch with a rectangular multi-light window aligned slightly west of the center of the façade, and a rectangular multi-light window centered on the gable end. A large brick chimney rises from the south elevation and the roof is covered with solar panels.

Statement of Significance

The 1.5 story house was constructed in 1907. Although the architect is unknown, the Craftsman styling with shingle siding and large square columns contribute to the district. The house was constructed during the district's period of significance and it retains sufficient integrity to contribute to the district.

Physical Description

This 2.5 story residence was designed in the Craftsman style but it was substantially remodeled in the 1950s. The plan is irregular as the result of multiple additions on the west end. The north-facing primary façade is presented with a low pitched front gabled roof and a large one story wing with a flat roof. A recessed and overhung porch is off center with an additional entry door on the west end of the façade. Most of the windows on the house are rectangular metal windows, but a handful of original wood multi-light windows remain on the original structure. The first and second floor are covered in horizontal wood siding and the gable end is covered with painted wood shingles. The east elevation is mostly symmetrical. The west elevation includes a single story wing that connects the main residence with the historic garage to form one combined structure. The house was converted to a nursing home in 1955 when many of the exterior changes occurred.

Statement of Significance

The house was constructed in 1907 as a single family residence in the Craftsman style. In 1955, the house was converted to the Kirby Nursing Home and ultimately to the Keller Nursing Home. It served as a nursing home until the late 1990s or early 2000s. The house was constructed and modified into a nursing home during the district's period of significance and it retains sufficient integrity to contribute to the district.

Physical Description

This 2.5 story residence was designed in the Colonial Revival style. The house is located on a corner lot. The west-facing primary façade is presented with a hipped roof, hipped dormer, and a recessed porch supported by Classical columns. The south end of the wrap around porch was enclosed and concrete steps were constructed in the 1950s. The house is supported on a basalt block foundation. The house is covered in horizontal wood siding with the exception of the enclosed side porch that is covered with painted stucco. The house features a mix of original and replacement windows. A transomed window remains on the front porch and a distinct leaded window remains on the dormer. Two front doors are located on the north end of the porch. The house was converted to apartments in 1950.

Statement of Significance

The Thomas Skerritt House was constructed in 1907 in the Colonial Revival style and it retains typical elements including its Classic Box form, classical columns, and low slung hipped roof. The house was constructed during the district's period of significance and it retains sufficient integrity to contribute to the district.

Physical Description

This 2.5 story residence was designed in the Craftsman style. The plan is rectangular and the house is located on a corner lot. The north-facing primary façade is presented with a hipped roof, hipped dormer, and a recessed and overhung porch supported by square columns. The porch was reconstructed in 1950 but it matched the size of the original (permits). The house is covered in horizontal wood siding. The windows have been replaced with vinyl units. There is a door on the second floor but Sanborn Maps do not indicate a second floor porch in the past. The west elevation includes an angular projecting bay and a massive brick chimney. The house was converted to apartments in 1950.

Statement of Significance

The house was constructed in 1906 in the Craftsman style for attorney Arthur B. Lee. It is designed in the "Classic Box" form with its hipped roof and angular bays that are characteristic of the style. In 1913 a charger for electric cars was installed in the house, which tells of the impact of changing transportation methods in the district. The house was constructed during the district's period of significance and it retains sufficient integrity to contribute to the district

This 2 story residence was designed in the Craftsman style. The primary façade is presented with a hipped roof with distinct shed style roofs with exposed rafter tails projecting from the east and west elevations. The house has an overhung porch supported with square brick columns. The house is constructed of brick with a concrete foundation. The house retains many of its historic wood windows including a large multi-light wood window on the west end of the façade and a pair of multi-light wood windows centered on the second floor. The house was converted to a duplex in 1943 and an extra unit was added in 1949.

Statement of Significance

The house was built in 1927 in the Craftsman style by general contractor Edward J. Morin who lived in the house with his wife Grace after construction. The house retains typical characteristics including brick siding, distinct roof form, multi-light windows, and exposed rafter tails. The house was constructed during the district's period of significance and it retains sufficient integrity.

Physical Description

This 2 story residence was designed in the Neoclassical style with Beaux Arts influence. The plan is irregular with a stepped protruding wing and porch on the east elevation. The south-facing primary façade is presented with a hipped to flat roof and a two story overhung porch with a full size second floor balcony supported by four massive Classical columns. The house is supported on a foundation of basalt blocks. The house is covered in horizontal metal siding. Four rectangular wood multi-light windows with distinct transom windows are equally spaced across the facade with a centrally located front door. The east elevation is asymmetrical with a protruding wing and side porch. A second floor addition was constructed over the side porch to accommodate additional apartment units. The west elevation is mostly symmetrical. The house was converted to apartments in the 1930s.

Statement of Significance

The C.F. Clough House was constructed in 1907 for former Spokane Mayor C.F. Clough and his family. The Neoclassical styling with Beaux Arts evident in the massive columns and second floor porch contribute to the district. The house was constructed during the district's period of significance and it retains sufficient integrity to contribute to the district.

Plan: I Siding: I		Windows: I	Porch: I	
Classification	: Contributing			

This 2 story residence was designed in the English Tudor Revival style. The plan is rectangular with the short side facing the street. The primary façade is presented in a symmetrical form with a cross gabled roof and a recessed porch supported with groups of square shaped columns. The house is supported on a rubble basalt foundation and a brick chimney rises from the west elevation. The house is covered in painted stucco with half-timbering details. The front door is located to the east with a small rectangular window to the east and a rectangular wood multi-light window to the west of the door. One large square wood window is bookended by two small square wood windows on both sides. Both east and west elevations are asymmetrical. The house was converted to a duplex in 1950.

Statement of Significance

The house was built in 1907 in the English Tudor Revival style. It was converted to a duplex in 1950 during the post WWII housing boom in Spokane. The house retains typical elements including half timber details and grouped square columns. The house was constructed during the period of significance and it retains sufficient integrity to contribute to the district.

Date(s) of Co	onstruction: 1908			
Historic Name: Burr Apartments		Common Name:		
Resource ID: 183		Address: 824 S Monroe St		

This 2 story building was designed in a vernacular style. The plan is rectangular with the long side facing the street. The east-facing primary facade is presented in a symmetrical form with a flat roof and three overhung porches supported with square shaped brick columns. Each overhang feature multiple doors. A brick chimney rises from the center of the roof. The south two-thirds of the building is covered with pressed concrete blocks and the north third is covered with brick veneer. At some time an addition was completed to expand the building to the north. There are four front doors located under each overhung porch, two above grade and two below grade. Each of the three sections has matching fenestration patterns with rectangular wood multi-light windows on each side of the entryways, with matching windows directly above on the second floor. Two smaller rectangular wood windows are located above the entryway between the larger second floor windows. The north and south elevations are mostly symmetrical and feature rectangular windows. The west elevation appears to be three stories as the ground level is lower on the west side. Wrought iron balconies stretch the length of the second and third floor with doors located on the balcony for each unit.

Statement of Significance

The Burr Apartments were constructed in 1908 by building contractor Blair G. Gilliland in a vernacular style. The building was one of the first buildings in the district originally constructed as a multi-family residence. Mrs. Iva S. Burr owned the building in the 1920s and 1930s. The building was constructed during the period of significance and it retains sufficient integrity to contribute to the district.

Physical Description

This 2 story residence was designed in the Craftsman style with Swiss Chalet influences. The plan is rectangular with the shorter side facing the street. The south-facing primary façade is presented in a symmetrical form with a low pitched front gabled roof and a recessed porch supported by square columns. The first floor is covered in horizontal wood siding, the second floor is covered with painted wood shingles, and the gable ends are stucco with stickwork detailing. The front door is located on the east end of the façade and a series of rectangular wood multi-light windows is located to the west. The east and west elevations are mostly symmetrical. A large brick chimney with huge basalt inclusions rises up the west elevation.

Statement of Significance

The Moye House was constructed in 1908 for construction manager Edward Moye and his wife Clara. The house retains its Craftsman styling with Swiss Chalet influences like stucco with stickwork detailing and exposed brackets. The house is individually listed on the Spokane Register of Historic Places. The house was constructed during the district's period of significance and it retains sufficient integrity.

Physical Description

This 2.5 story residence was designed in the Craftsman style. The southfacing primary façade is presented with a side gabled roof with a massive shed dormer that is interrupted by a gable roof in the middle. An overhung porch with its own side gabled roof is supported with grouped classical columns. A second floor porch sits below the shed dormer and is supported by paired classical columns. The dormer walls are curved. The bargeboard feature flair details on the ends. The chimney is constructed of basalt and clinker brick. The first floor is covered in horizontal wood siding, the second floor porch balustrade is covered with painted wood shingles, and the gable end is covered with stucco. The house retains its historic wood windows including some in a multi light arrangement with hourglass shapes. The house was converted to a duplex in 1953 (permits).

Statement of Significance

The house was constructed by building contractor Amil T. Johnson in 1909 in the Craftsman style. It retains typical features including detailed bargeboards, classical columns, curved dormer walls, and use of native stone. The house was constructed during the district's period of significance and retains sufficient integrity to contribute to the district.

Physical Description

This 1.5 story residence was designed in a Craftsman style. The southfacing primary façade is presented with a low-pitched front gabled roof and a recessed porch on the east end supported with square columns. The eaves are bracketed and the bargeboards have flair details on the end. The house appears to have originally featured a full length front porch but neither building permits or Sanborn Maps corroborate that. The chimney features basalt and clinker brick inclusions. The first floor is covered in horizontal wood siding and the gable end is covered with painted wood shingles. The windows appear to have been replaced with vinyl units but one multi light window is retained on the east end of the first floor.

Statement of Significance

The house was constructed in 1909 in the Craftsman style. It retains typical features including its low slung roof, bracketed eaves, use of native stone, and shingle siding. The house was constructed during the district's period of significance and retains sufficient integrity to contribute to the district.

Classificatio	n: Contributing (SRH	P)	•

This 2 story residence was designed in the Queen Anne Free Classic style with some Craftsman elements. It is a good representation of the transitional period from Queen Anne to Craftsman. The west-facing primary façade is presented with the front gable of a cross gabled roof and an overhung porch supported with classical columns and a balustrade that features spindlework. A pedimented entryway provides access to the porch on the primary façade and on the south elevation. The south elevation entryway provided access to an apartment unit that was part of the original design. Four exposed rafter tails punctuate the pediment form at the top of the front gable. The first floor is covered in horizontal wood siding and the second floor and pediments are covered in painted wood shingles. The house retains its historic wood windows including a distinct multi light example at the top of the front gable.

Statement of Significance

The Elias House was built in 1909 in the Queen Anne Free Classic style and it retains typical features including classical columns, pedimented entryway, and spindlework balustrade. The house was constructed during the district's period of significance, it is individually listed on the Spokane Register of Historic Places, and it retains sufficient integrity to contribute to the district.

This 2 story residence was designed in the Colonial Revival style. The east-facing primary façade is presented with a hipped rood with centrally located hipped roof dormer. A small porch on the north end is supported with square columns and a pedimented entryway provides access to the porch. The house originally featured a full length front porch but it was fully enclosed on the south end (Sanborn Maps). An angular projecting bay is located on the second floor. The house is covered in horizontal wood siding. The house appears to retain its historic wood windows. The house was converted to a duplex in 1949 and an additional unit was added in 1953 (permits).

Statement of Significance

The residence was constructed in 1909 in the Colonial Revival style and it retains typical elements including angular projecting bay and pedimented entryway. The house was constructed during the district's period of significance and retains sufficient integrity to contribute to the district.

This 2 story residence was designed in the Craftsman style. The northfacing primary façade is presented with a shallow pitched hipped roof with centrally located hipped roof dormer with dentil details below the dormer. An overhung porch is supported with square columns and the west end of the porch has been enclosed but the column to the west of the entryway was retained (Sanborn Maps). The columns feature molding and dentil details. The house has wide overhanging eaves. The first and second floor are covered in horizontal wood siding and the dormer is covered in painted wood shingles. The house appears to retain its historic wood windows including some leaded glass transoms and a series of multi light examples on the dormer. The house was converted to a 5 unit apartment complex in 1943 (permits).

Statement of Significance

The house was constructed in 1909 in the Craftsman style and it retains typical features including its low slung roof, dentil detailing, and multi light windows. The house was constructed during the district's period of significance and it retains sufficient integrity to contribute to the district.

This 3 story apartment building was designed in the Craftsman style. The building has a flat roof with a small cornice with tile roof and exposed rafter tails. A small shed roof supported by brackets provides access to the common area of the apartment complex. The apartment house originally featured porches on the upper floors but they were enclosed to create additional living space. The building is constructed of brick with an the areas where the porches were enclosed are covered with stucco. The building has some replacement windows with internal grids but it also retains some historic wood windows including two on the primary façade in a 24 over 1 configuration. Both east and west elevations feature angular projecting bays.

Statement of Significance

The Alkazar Flats were constructed in 1909 in the Craftsman style. The flats were developed by businessman R. L. Irvine. The building retains typical elements including exposed rafter tails, distinct cornice, and angular projecting bays. The building was constructed during the district's period of significance and it retains sufficient integrity to contribute to the district.

Physical Description

This 2.5 story residence was designed in the American Foursquare style. The plan is square shaped and the house is located on a corner lot. The west-facing primary façade is presented in a mostly symmetrical form with a hipped roof with hipped dormer and an overhung porch supported by square brick columns. The house is supported on a basalt foundation and a brick chimneys rises from the south end of the roof. The first and second floor are covered in brick and the dormers are covered with painted wood shingles. Narrow rectangular sidelights are directly adjacent to the front door and a different sized rectangular wood window is located on each side of the door. Two square wood multi-light windows are located on each end of the second floor with a smaller square window in the center. The house was converted to apartments in the 1940s.

Statement of Significance

The O.M. Lilliquist House was constructed in 1907 by building contractor Olaf M. Lilliquist for himself and his family. It is designed in the American Foursquare style exhibiting a combination of the Colonial Revival "Classic Box" form and Craftsman styling. The house was constructed during the district's period of significance and it retains sufficient integrity.

Physical Description

This 2.5 story residence was designed in the English Tudor Revival style. The plan is rectangular with a side gabled roof with a massive front gable and a smaller gable roof dormer. An overhung porch is supported with grouped square columns that rise from basalt piers and top of the gable porch roof are exposed stickwork framing details. The bargeboards are squared at the ends with brackets positioned under the squared section. The first floor is covered in horizontal wood siding which is separated by a bellyband before transitioning to the gable ends and dormers that are covered in stucco with half-timbering details. The house appears to retain its historic wood windows including some with a multi light configuration at the top of the massive front gable. The house was converted to apartments sometime before 1958 and an additional unit was added that year (permits).

Statement of Significance

The Comstock House was built in 1910 in the Tudor Revival style. The house was designed by Loren L. Rand and it retains typical elements including grouped columns, half timbering details, and use of native stone. The house was constructed during the period of significance, it is individually listed on the Spokane Register of Historic Places, and it retains sufficient integrity to contribute to the district.

Plan: S	Siding: I	Windows: I	Porch: I
Classification	: Contributing		

Physical Description

This 2 story residence was designed in the Mission Revival style. The northfacing primary façade is presented with a hipped roof and a parapet along the roofline. A full length front porch is supported by square brick columns that are turned so the pointed end of the square is facing the street. The columns sit atop a basalt block balustrade and the porch is tucked behind angled arches. The house is covered with stucco. The house appears to retain its historic wood windows including transom windows that feature a distinct hourglass shape. These windows may have been a hallmark of Morrison's designs because there are at least two other examples of his designs where they are used. Sometime before 1951 the house was converted to a medical clinic and in that year it was converted to a 3 unit apartment.

Statement of Significance

The house was constructed in 1911 by Aaron L. Lundquist in the Mission Revival style. It was designed by Spokane's "boy architect" Earl W. Morrison and it retains typical elements including parapet roof line, arched porch openings, and stucco siding. The house was constructed during the district's period of significance and it retains sufficient integrity to contribute to the district.

This 2 story residence was designed in the Craftsman style with a side gable roof. The north-facing primary façade is dominated by a massive front gable dormer with wide overhanging eaves and bargeboard with cutout detailing at the ends. Rafter tails are exposed on the side gabled roof. Two small shed dormers protrude on each side of the massive gable dormer. The porch is supported by square brick columns and a pedimented entryway is located on the east end. The first floor is covered in painted horizontal wood siding and the gable end and pediment feature a half timbered look with stucco and wood detailing painted in different colors. The house retains its historic wood windows including a pair of distinct 36 over 1 wood windows on the massive gable dormer. A basement level garage is accessed by a driveway on the west end.

Statement of Significance

The Roche House was constructed in 1910 in the Craftsman style. The house retains typical features including a pedimented entryway, half-timbering details, and full length front porch with wide square columns. The house was constructed during the district's period of significance and it retains sufficient integrity to contribute to the district.

This 2 story house was designed in the Craftsman style. The south-facing primary façade is presented with a hipped roof and central hipped roof dormer, both showing their exposed rafter tails. An overhung porch is supported by square columns with wood detailing. The east end of the porch was enclosed and now featured multi-light wood windows. The first floor is covered in narrow wood siding and the upper floor is covered in stucco with wood molding details in square shapes. The house retains many of its historic wood windows.

Statement of Significance

This house was constructed in 1909 in the Craftsman style and it retains typical features including exposed rafter tails, square columns, and distinct wood detailing on the second floor. The house was constructed during the district's period of significance and it retains sufficient integrity to contribute to the district.

Physical Description

This 2 story residence was designed in the Dutch Colonial Revival style. The plan is square shaped and the house sits on an elevated site. The primary façade is with a cross gambreled roof and an overhung porch that is supported with square columns. The cross gables are not gambrel style like the front gable indicating that they may be additions. A second story porch is recessed in the front gable with rounded gable walls. The house is covered in horizontal wood siding. An entry door is situated to the east end of the primary façade with a square wood window to the east of the door and a rectangular multi-light window on the west end of the primary façade. Four rectangular wood windows are evenly spaced on the second floor. The east and west elevations are dominated by the cross gable. The house was converted to apartments in the 1940s and additional changes were made in 1951.

Statement of Significance

The John F. Miller House was built in 1905 for John F. Miller and his family. The house is designed in the Dutch Colonial Revival style with typical features including a gambrel roof and recessed second floor porch. The house was constructed and modified during the district's period of significance and it retains sufficient integrity to contribute to the district.

This 1.5 story residence was designed in a Craftsman style. The southfacing primary façade is presented with a low-pitched front gabled roof with a secondary gable with light cornice returns. An overhung porch on the east end is supported with tapered square columns that sit atop brick piers and a brick balustrade. The house is covered with horizontal wood siding. The house retains its historic wood windows including many that are in a multi light configuration.

Statement of Significance

This house was constructed in 1939 in the Craftsman style. It retains typical features including its low slung roof, tapered columns, and multi light windows. The house was constructed during the district's period of significance and retains sufficient integrity to contribute to the district.

Physical Description

This 1.5 story residence was designed in the Tudor Composite style in a cottage form with a side gabled roof. The primary façade is presented with two front gables, one steeper than the other. A small set of stairs provides access to the entryway located under the steep gable. A drive-way on the east end provides access to a basement level garage. The house is covered with multicolor clinker brick and the gable ends are covered with horizontal siding. A distinct key shaped brick detail is centered at the top of both of the front gables. The windows appear to have been replaced with vinyl internal grid units.

Statement of Significance

The house was constructed in 1940 in the Tudor Composite style by W. Pelleberg. The house retains typical features including a steeply pitched roof, clinker brick siding, and distinct key details. The house was constructed during the district's period of significance and it retains sufficient integrity to contribute to the district.

Plan: I	Siding: I	Windows: I	Porch: I	
Classificatio	n: Contributing			

This 2.5 story apartment building was designed in the Minimal Traditional style with a side gabled roof. The west facing primary façade is presented with two front gables at each end, one larger than the other. The gables feature shallow cornice returns. A small porch stretches between the gables on both the first and second floors. The building features a daylight basement with windows on the primary façade. The building is covered with multicolor clinker brick veneer and there are distinct masonry vents of different designs on top of both front gables. On each end of the primary façade is a distinct peanut brittle type masonry feature with brick and other stone. The building appears to retain its historic wood windows, most of which are in a multi light configuration. The building was originally designed as a duplex but by 1952 it had been expanded to four units (permits).

Statement of Significance

The apartment building was constructed in 1940 in the Minimal Traditional style by Nickey & Peterson. The building retains typical features including cornice returns, vented gable tops, clinker brick, and limited decorative detailing. The building was constructed during the district's period of significance and it retains sufficient integrity to contribute to the district.

Classificatio	n: Contributing		-

Physical Description

This 2.5 story apartment building was designed in the Minimal Traditional style with a hipped roof. The roof material is metal but it is designed to simulate a tile roof. Based on the historic photo, the metal material appears to be original. The west facing primary façade is presented with three bays of windows and a centrally located overhung porch supported by round columns. The porch roof also appears to be metal. The building features a daylight basement with windows on the primary façade and an entryway tucked beneath the main porch. The building is covered with multicolor brick veneer and a detailed wood molding course runs along the roofline. The building retains its historic wood windows, most of which are in a multi light configuration. The windows were originally bookended by shutters that have been removed.

Statement of Significance

The apartment building was constructed in 1940 in the Minimal Traditional style by A. J. Carr who built many buildings in the district. The building retains typical features including multi light windows, round columns, and limited decorative detailing. The building was constructed during the district's period of significance and it retains sufficient integrity to contribute to the district.

Classification	1: Contributing	-	-	

This 2.5 story apartment building was designed in the Minimal Traditional style with a hipped roof. The original building footprint is the east end and the large 3 story wing on the west with mansard roof appears to be an addition. There is no building permit for the addition. The added wing is well differentiated from the original section. The south facing primary façade is presented in a U shape with the primary entryway on the east end. The building is covered with stucco. Most of the windows have been replaced but the some original units are retained on the east end of the primary façade. A distinct corner window gives an Art Moderne flair. A gable end protrudes from the hipped roof with slit vents. A two car basement level garage and porches for units on the second and third floor are visible on the west elevation.

Statement of Significance

The apartment building was constructed in 1940 in the Minimal Traditional style by Seymour Northrop. The building was designed by architects Whitehouse & Price and it retains typical features including corner window, vented gable end, and limited decorative detailing. The building was constructed during the district's period of significance and it retains sufficient integrity to contribute to the district.

Physical Description

This 1.5 story duplex was designed in the Cape Cod style with a side gabled roof. The east facing primary façade is presented in a symmetrical arrangement with two gable roof dormers protruding from the roof and a small overhung stoop entryway. A second entryway is located on the south end and is accessed by an exterior staircase to the second floor. The first floor is covered with multi color brick and the gable ends and dormers are covered with painted wood shingles. Louvered vents are centered on the tops of the gable ends. The windows have been replaced with vinyl replacement units. The house was converted to apartment units but the date of conversion is unknown.

Statement of Significance

This residence was constructed in 1941 in the Cape Cod style by G. W. Bungay. The house retains typical features including shingle siding, protruding dormers, and symmetrical arrangement. The house was constructed during the district's period of significance and it retains sufficient integrity to contribute to the district.

Physical Description

This 2 story residence was designed in the Dutch Colonial Revival style. The residence was originally designed as a garage but was converted to apartments in 1942. The primary façade technically faces west, however the street facing façade is the south elevation. The residence is not fully visible from the street due to a change in the grade. The street facing façade is presented with a gambreled roof and a series of three windows are centered on the gambrel end. The residence is covered with stucco and painted horizontal siding. The primary access to the apartment units is on the west elevation but that elevation can only be viewed from the alley.

Statement of Significance

The Thaddeus S. Lane Garage was constructed in 1913 by Charles Jasper. The garage was designed by renowned architects Kirtland Cutter and Karl Malmgren in the Dutch Colonial Revival style. The garage was substantially remodeled in 1942 to accommodate apartment units during World War II. The residence retains typical elements including gambrel roof and pedimented gable top. The residence was constructed during the period of significance and it retains sufficient integrity to contribute to the district.

Classification	: Contributing (Listed	on the SRHP on 1	11/7/2022)

This 2.5 story apartment building was designed in the Mid-20th Century Modern style with a flat roof. Raised on sculpted legs, the building affords an impressive view for the tenants. Wood walkways and stairs provide access to the units from the street level on the south elevation. The building was built without disturbing a massive basalt outcropping that separated the building from 6th Avenue. The north facing elevation is presented with two floors of panels and windows in alternating configurations. The building is covered with concrete board and wood siding. The building retains a mix of historic windows and replacement vinyl units.

Statement of Significance

The apartment building was constructed in 1949 in the Mid-20th Century Modern style by contractor Eric Plath. The building was designed by renowned architects Royal McClure, Thomas R. Adkison, & Bruce Walker and it retains typical features including its distinct block form and its use of alternating panels and windows on the north elevation. The building was constructed during the district's period of significance, it is individually listed on the Spokane Register of Historic Places, and it retains sufficient integrity to contribute to the district.

Physical Description

This 1 story duplex was designed in the Minimal Traditional style. The south facing primary façade is presented with a side gabled roof and a pair of small stairways on each end of the side gable that provides access to stoop entryways. The house is covered with buff brick veneer and the gable ends are covered in horizontal siding. The gable tops are vented with slits. The house appears to retain its historic metal windows. Metal awnings provide shade for the windows on the primary façade.

Statement of Significance

The duplex was constructed in 1950 in the Minimal Traditional style by Aladdin Builders who constructed at least one additional duplex in the district. The duplex retains typical features including brick veneer, vented gable tops, and limited decorative detailing. The house was constructed during the district's period of significance and it retains sufficient integrity to contribute to the district.

This 1 story duplex was designed in the Minimal Traditional style and the house is situated on an elevated corner lot. The south facing primary façade is presented with a side gabled roof and a small stairway that provides access to a stoop entryway supported by wrought iron pillars on the southeast corner. Two additional entrances are located on the south elevation tucked beneath the side gable which features shallow cornice returns. The house is covered with buff brick veneer and the gable ends are covered in horizontal siding. The gable tops are vented with slits. The house appears to retain its historic metal windows. An additional unit appears to have been added but the date of the change is unknown.

Statement of Significance

The duplex was constructed in 1950 in the Minimal Traditional style by Aladdin Builders. The duplex retains typical features including brick veneer, vented gable tops, and limited decorative detailing. The house was constructed during the district's period of significance and it retains sufficient integrity to contribute to the district.

This 1.5 story residence was designed in the Tudor Composite style in a cottage form. The north facing primary façade is presented with a steeply pitched side gabled roof and small front gable, all with cornice returns. A tiny gable dormer is centered on the roof. A small staircase provides access to a stoop entryway with arched doorway. The chimney is tucked behind the front gable and is tapered to the top. The chimney has a key detail centered near the top. The house is covered with multicolor striated brick except for the dormer which is covered in horizontal siding. Most of the windows appear to have been replaced with vinyl internal grid replacement units but the house does retain the arched shape of a window on the east end.

Statement of Significance

This residence was constructed in 1930 in the Tudor Composite style and it retains typical features including a steeply pitched roof, tapered chimney, arched doorway, and cornice returns. The house was constructed during the district's period of significance and it retains sufficient integrity to contribute to the district.

Classificatio	n: Contributing		

This 1 story duplex was designed in the Minimal Traditional style with a mansard tile roof. The primary façade is presented with two one car garages at the basement level and two stairways on either side of the garage that provides access the units. The top of the garage is lined with a simple balustrade to create an elevate porch The house is covered with multicolor brick veneer and the garage is covered with painted stucco. A massive chimney rises from the center of the façade with clay chimney pots capping the chimney. The windows appear to have been replaced with vinyl replacement units.

Statement of Significance

The duplex was constructed in 1954 in the Minimal Traditional style by E. R. Spencer who built multiple building on the surrounding blocks. The building retains typical features including brick veneer, massive chimney on the façade, clay chimney pots, and limited decorative detailing. The house was constructed during the district's period of significance and it retains sufficient integrity to contribute to the district.

Physical Description

This 1 story duplex was designed in the Minimal Traditional style with a hipped roof. It is located on a sloped site which makes the street facing façade appear 1 story but it stretches to 2 stories on the west and south elevations. The north facing primary façade has two small stairways that provides access to two small porches with a door for each unit. Two additional doors, one accessed by a stairway to the upper floor, are located on the northwest corner. The upper floor is covered with distinct narrow textured structural tiles that have been painted and the bottom floor is painted concrete. The windows appear to have been replaced with vinyl replacement units.

Statement of Significance

The duplex was constructed in 1954 in the Minimal Traditional style by Gerald O. Wilson. The building retains typical features including brick veneer, low pitched roof, and limited decorative detailing. The house was constructed during the district's period of significance and it retains sufficient integrity to contribute to the district.

This 2.5 story apartment building was designed in the Mid-20th Century Modern style with a low pitched hipped roof and overhanging eaves. The building is part of a two building complex where the primary entrances of the building face each other and create a courtyard feeling. The north facing primary façade is presented with a massive chimney that is capped with clay chimney pots. The primary entrance is on the west elevation and it is accessed by a wood staircase. The building is covered with red brick veneer. The building appears to retain its historic windows including corner windows on all the floors on the southwest corner which give an Art Moderne flair.

Statement of Significance

The apartment building was constructed in 1955 in the Mid-20th Century Modern style by W. B. Russell. The building retains typical features including corner windows, clay chimney pots, and red brick veneer. The building was constructed during the district's period of significance and it retains sufficient integrity to contribute to the district.

Physical Description

This 1 story duplex was designed in the Minimal Traditional style with a front gabled roof with shallow cornice returns. The duplex has no entryway on the primary façade but instead had a door on each side elevation accessed by a paved path. The lower third of the house is covered with multi color brick veneer and the upper two thirds is covered with horizontal siding. Red brick forms a band course that separated the two types of siding and the window sills are red brick. A chimney rises from the top center of the roof and clay chimney pots cap the chimney. The house appears to retain its historic windows and two lightwells with windows on the primary façade provide light for the basement.

Statement of Significance

The duplex was constructed in 1955 in the Minimal Traditional style by Jack Wilson who built many duplexes in the district. The building retains typical features including brick veneer, clay chimney pots, and limited decorative detailing. The house was constructed during the district's period of significance and it retains sufficient integrity to contribute to the district.

This 1.5 story house was designed in the Ranch style with a hipped roof and it is situated on a sloped corner lot. The slope causes the building to appear as 1 story on the east facing primary façade and 2 stories on the north elevation. The primary façade is wide and includes an attached garage. The house has a centrally located overhung stoop entryway. The house is covered with horizontal siding. Clay chimney pots cap the chimney and a small gable protrudes from the center of the roof with slit vents. The house appears to retain its historic windows.

Statement of Significance

The house was constructed in 1955 in the Ranch style by Keith M. Greer. The building retains typical features including attached garage, wide rambling, corner windows, attached garage, wide rambling façade, slit vent, and limited decorative detailing. The house was constructed during the district's period of significance and it retains sufficient integrity to contribute to the district.
